

THE QUESTION EVERYONE IS ASKING

Is SEO **dead** in 2026?

What it really means for the pharma and health industry in Canada.

Swipe →

Here's my honest answer:

SEO isn't dead.

**But the SEO you
knew? That's gone.**

Search itself has changed — not disappeared. This is a transformation, not an ending.

THE SHIFT

Your customers don't “search” the way they used to.

ChatGPT

Perplexity

Google AI Overviews

They ask a question and get a synthesized answer — often without ever clicking a website.

1

PRINCIPLE 1

Your content must be citable by AI

Not just ranked by Google. Clear structure, factual data, verifiable sources — that's what generative engines actually cite.

2

PRINCIPLE 2

E-E-A-T is no longer optional

For YMYL (Your Money, Your Life) topics, Google and LLMs demand demonstrable expertise. A pharma SME without authority signals is simply invisible.

3

PRINCIPLE 3

Compliance becomes an SEO advantage

Content built to PAAB and Health Canada standards is, by nature, exactly the kind of structured, trustworthy content AI engines favor.

MY TAKE

Too many pharma SMEs hand their visibility to SEO agencies that understand **neither PAAB nor regulatory constraints** — nor why one wrong word can become a real problem.

SEO now requires understanding your industry as much as understanding Google.

Is your content strategy ready for AI search?
